

DEC 22

Ref: 8HMM-SR

Mr. Kent Gray  
Utah Department of Health  
P.O. Box 16690  
Salt Lake City, Utah 84116-0690

Dear Kent:

EPA has no remaining comments on the following Preliminary Assessments (PAs). The PAs will be entered into CERCLIS effective today, December 22, 1987.

1. Bingham Creek Channel - UTD980959324
2. Denver & Rio Grande Railroad - South Roper Yard - UTD 918545932
3. Dry Valley Vanadium Mill - UTD980952790
4. Green River Uranium Tailings - UTD980717995
5. Kennecott Power Plant - UTD980959282
6. Leeds Silver Reclamation Site - UTD981550619
7. Plateau Inc./ Roosevelt Refinery - UTD073093874
8. Vipoint Mine - UTD981545957
9. Vitro Uranium Mill Tailings - UTD980717698
10. 102nd South Dump - UTD980959217

Under the Multi-Site Cooperative Agreement (MSCA), the State has committed to completing 30 PAs for FY-88. With the finalization of the ten PAs listed above, the State will have completed fourteen of its target of 30 PAs for FY-88.

EPA concurs with the State's recommendations for a 'priority' site inspection at the Bingham Creek Channel, Denver & Rio Grande Railroad and the Leeds Silver Reclamation sites. EPA recommends that the State develop sampling plans for these sites and submit them for our review before the State begins field activities at these sites. We also agree with the State's recommendation for 'no further action' at the other seven sites.

I appreciate the efforts of you and your staff in completing these last PAs to meet our SARA goals by the end of the year. I hope together we can wrap-up some of the Site Inspection reports in the next couple of months before entering the next field season. I wish you and the staff a Happy Holiday Season.

Sincerely,

Paula M. Schmittziel  
Remedial Project Manager
